## How to make a seed starter pot

1. Gather newspaper and cut into strips.
2. Place strips in a bowl and soak overnight in water.
3. Drain water and place strips into mold.  
A disposable cup or muffin tin works well as a mold.
4. After the paper dries completely remove the pot and start planting seeds! Once the seeds start sprouting you can transplant the entire pot to an outdoor garden since the paper is biodegradable.
